

Our mission

In the last year, we provided crucial services to many happy clients and we are on course to smash this record in the future.

Electronics is our passion, that we lead everyday to create something new. Your idea is our starting point for developing your project with us.

About us

We are a team of Electronic Engineers with electronic circuits design experience who are dedicated to helping our clients with their electronic design projects.

Your needs...our business.

LoMi Electronics

Think fast, Design Smarter!

Activities

Starting from the schematics, we can simulate the project, design a custom PCB and create a 3D step for your mechanical integration.

For Microcontroller and FPGA, we can provide the necessary Firmware to make your application real.

More than ten years of experience in Labview Programming for Instruments communication and control can address any challenge.
